RE: Daya Recovery Job # 47928  
Attn: Anita Arriola

Dear Anita,

In regards to the Nokia E71-2 (Serial Number) you sent to us for Data Recovery it has been determined that the data is not recoverable. There are several reasons that the data cannot be recovered.

First the water sensor on the phone has been activated indicating that the phone was exposed to water. This could be a reason the data is not recoverable

Second we found that the phone has been completely erased. This can only be accomplished by "Master Resetting" the phone. The user data was erased and all of the factory data was erased as well including any photos or wall paper that the phone came with.

Third we discovered the SD Card was blown rendering it useless. We suspect that voltage was applied to it but are not sure.

Thank You,

Daniel R. Strizich
